Pro-Face America ST Series 3.8” HMI Operator Interfaces for \$299!

Saline, MI – November 2004 – Pro-face America announces breakthrough price versus performance levels on the new ST40x series touch screen graphical operator interfaces. The ST operator interface is the fastest compact 3.8 inch HMI amber display on the market today. These highly compact operator interfaces include six function keys configurable per screen. Combined with Pro-face America’s GP PRO development software, the ST series provides real-time trending, active and historical alarming, recipe management, bar coding and scripting for maximum flexibility. At \$299, Pro-face America packs more features, more capability and more value in one little unit than most other HMIs in this class.

ST40x operator interfaces feature a maintenance free LED back light. The high contrast QVGA amber screen includes 8 tonal graduations rendering imported graphic objects and bitmaps into crisp clear images. The industry’s most popular serial protocols are supported through the RS232, RS422 or Siemens RS485 MPI serial ports. The ST40x series can easily interface to AB, Koyo, Modicon, Omron, Siemens, and wide variety of other popular controllers. Units are certified to international standards plus UL and cUL listed for class 1 Div 2 hazardous areas.

ST40x applications are quickly developed with GP PRO full-featured HMI development software. With an 1800 industry standard parts library and jpeg importing highly detailed HMI screens with animation are possible. ST40x units applications include security systems, machine dispensers, auto washers, weigh scale platforms, inventory management systems and any small footprint HMI application requiring mid size capabilities.
